As mentioned above, there is a broad range of APIs available to create custom applications. Many of these APIs are available for Windows, Mac OS X, Linux and Android operating systems. Windows and Mac OS X applications have a native GUI element in their interface, which can easily be extended. The Linux and Android applications have a native GUI element, but the implementation is provided by the operating system, so it is not possible to use a third-party component for this. Most of the 3D applications for AutoCAD Activation Code use it as a 3D modeler as well, such as TurboCAD and Simcenter. SharePoint integration To integrate with Microsoft SharePoint, AutoCAD can use the Application Data Access Services (ADAS) to connect to the underlying Microsoft Office application database, which stores the data used in the creation of the AutoCAD file. Using the SharePoint integration allows data that is stored on a SharePoint site to be accessed by AutoCAD, creating a working collaboration environment. AutoCAD users and templates The CadEditor cad software application for AutoCAD, is a free, open-source cad software for Windows, that can import AutoCAD DXF files as well as export in various formats. Some features include: CAD drawings can be zoomed in, out and rotated in three dimensions. Also the width and height of the drawing can be adjusted and locked. AutoCAD is capable of creating customized databases of 3D models, for example for visualisation purposes. AutoCAD supports the ability to import and export to: DWG and DXF file formats GeoTIFF image files PDF file format SolidWorks model formats VRML and STL formats XML formats Interoperability In early AutoCAD versions, the program could import some MacPaint (.paint and .pcl files) into the drawing. This feature has since been superseded by using the import drawing function.
