Apps and Layers (included in AutoCAD 2011 and 2015) Apps and layers are very similar to 3D features. An App is a collection of AutoCAD objects in one layer, along with related data values. A layer can be a 2D (laying on XY plane) or a 3D (laying on Z axis) layer. An App has an owner, associated AppRibbonBar, and other members of the App. It also has an associated layer ribbon, layer tab, and the Drawing and section view tabs. Apps are organized into groups that share an AppRibbonBar (for members) and function (for member actions). Groups are managed by grouping the layer, drawing and section views. All these elements can be managed via the AppManager. Add-on products AutoCAD developers have created a wide range of AutoCAD-based products, most of them for use in specific fields of industry. The prison requires that all inmates be able to walk to the unit they wish to occupy. They then drive the inmates to the cell block and hand them off to the officer that escorts them to the cell. During this time the inmate who is to be escorting the other inmate is still in his/her cell. Another officer must remain with that inmate and it takes approximately 20 minutes for that officer to get to the housing unit. These delays result in extended periods of time where inmates are not supervised. The officers that are on duty are supposed to be spending their time on the unit. The inmates are not to be free to roam about the housing units. On a regular basis there are high pressure areas in the housing units. Officers have reported that these pressure areas are caused by an accumulation of unsupervised inmates. These inmates are purposely harassing other inmates. Officers must work to resolve the problem of the high pressure areas. On a regular basis, officers are called to the housing unit to help inmates with some medical problem. They are called out to fix a faucet that is leaking, to fix a door that is stuck or locked and to work on a window that has been broken. Officers that are called out to the units to help the inmates, work on the unit for a few hours. They have to be careful so that they do not have to get back to their regular unit. They must go to the unit where the inmates that are being helped are being housed. At this time there are often only a few officers to escort inmates. They have to deal with the inmates that are there on a regular basis and usually there is not time to do their normal checks on the unit. Officers frequently have to wait outside a housing unit to get back to their regular unit. It is very common for officers to be called out to the unit for about an hour or two. They must then come back to their regular unit to relieve the other officers. They are then required to stay on the unit until the replacement officer
