Checkout the following AutoCAD tutorials for beginners to get started. Beginner AutoCAD is the most popular and widely used CAD software around. It is easy to use but powerful, with rich feature sets including 3D modeling and rendering, advanced NURBS surface modeling, parametric designs, parametric mass customization, etc. This tutorial is designed to help you get started with the most basic features of AutoCAD and learn some of its most basic and commonly used features. We will start out slowly and get progressively more advanced over the course of this tutorial. Enter some values and click the Create button to create your very first model. The first thing that you will notice is that the new model has a black background, and is divided into two panels. The middle of the viewport is “scanned” and empty, while the rest of the viewport shows your new model. The top left panel is your drawing tools. The top right panel is your viewport, which includes a measurement scale and tools for viewing and editing the model. The drawing tools panel consists of a selection tool, a pick tool, and a numbering tool. The selection tool allows you to select the entire object or to select a part of the object. The pick tool allows you to create new points or modify existing points. The numbering tool allows you to type in numbers or select an existing number and have it be displayed as an object label. Now that we have a new model, we can begin to draw lines and circles. Click the L-button to start drawing lines or circles. You can draw lines with the pick tool or the L-button. When you draw a line with the L-button, you will automatically select the line, and the L-button will turn green, indicating that you are now in “draw” mode. To select a part of your model, you can use the selection tool or the L-button. The selection tool allows you to select the entire object or to select a part of the object. When you select an object, the entire object will be highlighted in the viewport. When you click with the L-button, the L-button turns green indicating that you are now in “draw” mode. To undo a click, you can hold down the Ctrl key while clicking with the L-button. Next, let’s add some dimensions to our model by

"It's really hard to find love because people want the best in life. When they get the best, they don't stay around because it's hard to stay around people that are doing well," said Kent. But for Kent, he is all in, hoping to spend the rest of his life with his dream girl and brother. "I will love and care for her just as hard as I did the first time I met her," said Kent. With a love triangle, what can happen is two hearts may stop loving each other, and that's when someone's heart breaks. That was the case for Kent's brother, Jason. "He was the love of my life," said Jason. But he wasn't sure what happened in the last few months of his life. He was talking to his mother about love and he said he was in love with a girl named Heather. He said he sent her a text, and that night he didn't answer his phone. The next day, Jason's phone was dead. "My brother was taken away from me," said Kent. Jason's body was found in a motel room, with a gunshot wound to the head. It is believed he was shot by the same woman he was talking about. "She knew she didn't have any reason to kill him, but she took his life," said Kent. The question now for Kent is how do you move forward. But he is determined to love and find someone, not only for himself, but for
