Q: How do I test my reactive socket.io app with mocha? I am writing a test case to test the server side of my socket.io app. The setup is as follows:

```
var request =
require("request"); var socket =
require("socket.io"); var mocha =
require('mocha'); var chai =
require('chai'); var server =
require("http").createServer();
server.on("request", request.post);
```

```
server.listen(3001); const io =
socket.listen(server);
io.sockets.on('connection', (socket) =>
{ console.log('A new user has
connected.')});
```

I am pretty new to socket.io and have been struggling to get this up and running. I am trying to write a test case in mocha to check a particular feature I want to make sure it behaves as expected. The mock server I am using in the test case looks something like this: `var server = require("http").createServer(); var port = 3001; server.on("request",`

```
request.post); server.listen(port);  
server.on("connection",
```

It's 100% free, and this is all it asks to do. You can find it on its dedicated site, or, simply, in the Software Center. Download MZCacheView Mozilla Firefox Epiphany Web Browser Shareware,
