Shatter is a retro inspired space shooter. Launch yourself into orbit around a random planet and begin to destroy anything that moves. Shoot and shoot and shoot, eventually Shatter returns to you. Each random planet has their own theme and artwork, but only one is the official Shatter planet. In time you will unlock the other planet themes for play. As you progress you earn points, so try to be as destructive as you can. There are power-ups along the way that can harm your enemies or help you out. Be sure to grab those and use them wisely. You can also team up with your friend and attempt to destroy as many enemies at once as possible. A: Almost there; just one button to press; G, D, F, B (only on 360, sorry for that) A: The Space, The Time, The Chance! - A FPS with an 80's Retro Spectrum Synthesizer Soundtrack - World Record Score - 1,918,699 This game was released in 2017. Game Summary You take on the role of a "Space Shooter", a game from the 80's that lets you destroy a multitude of robotic (And sometimes human) enemies. The controls of the game are simple, but can only be done via right analogstick. As you can see from the screenshot, the game is horizontally split up into 16x8 square tiles, where each of them has a small environment (like a room). You can move left or right to explore more and more tiles, while shooting the enemies in each tile. The enemies are represented in the form of a small color-coded symbol on the bottom-right of each tile. If you shoot it, it will disappear, leaving empty spot in its place. You can shoot through enemies that are on top of you by hitting the back button. The soundtrack of the game consists of almost 50 retro-sounding synthesizer notes. Every time you destroy an enemy, the song changes in accordance to the color of the destroyed tile. The game features an end-of-level screen with a leaderboard: the highest score is displayed in red, while the others are green or blue. The game is in local co-op. The game has no background and can be played in dark.

Neon Infinity [32|64bit] 2022 [New]

Neon Infinity is an 80's inspired space shooter about battling evil green asteroids to conquer the universe and become the ultimate space ranger. In this game you will be unloading multiple gun-arms, rocket boosters and special ammo in an effort to try and destroy as many green asteroids as possible, each with their own ability. Notes -The platform will not shift under player input. Your movement will change where the game thinks you are. -Mover arms fire automatically. By default, during normal gameplay, your arms should be set to "auto fire". -Mover arms have a fire rate of 1. -Shooting will knock you back if your arms have no ammunition remaining. -Use powerups to increase movement, fuel, or ammo capacity. -Switching to local co-op will remove your custom high scores. In order to keep a high score with your friend, you will need to swap to the local co-op version of the game and vice-versa. -Movement speed is determined by your momentum. You will notice a "tick" as you move and each jump will make your momentum go down. You can use this to your advantage by jumping on top of your booster to increase your momentum, or jump off a booster to decrease momentum. -You start the game with two arm slots and four rocket boosters. Additional arm slots and boosters can be obtained by picking up pickups along the way. Reviews Neon Infinity = Amazing Neon Infinity is an 8 bit throwback to 80's RPGs. There's a heavy emphasis on collecting and the old-school feel really works and fits in perfectly with the music, the background graphics, and the audio. There are a lot of options and we're still a work in progress. -gamereplays.net Neon Infinity = Fun Neon Infinity is a relatively simple game that is always creating a new challenge. The controls and the structure are pretty easy to learn, but it's also a lot of fun. It's pretty rewarding to collect the cheevos, but it's even more enjoyable to destroy them. And there's something addicting about blasting away the green asteroids. -gamereplays.net Neon Infinity = A Good

What's new in Neon Infinity:

(album) **Neon Infinity** is the seventh studio album by American rapper Future. It was released on June 11, 2017, by Pluto Nash, 300 Entertainment, and eOne Music, and distributed by Universal Motown. It is his last album on 300 Entertainment, which is distributed by Interscope Records. The album features guest appearances from Drake, Kendrick Lamar, Travis Scott, Cyhi the Prynce, Young Thug, Liza Koshy, Ty Dolla Sign, Wifisfuneral, YG, Kirko Bangz, and Peewee Longway; Future co-wrote or co-produced all of the album's tracks. Following the release of the album, Future revealed that several songs would not be released due to a label conflict. The album was supported by the singles "All the Way Down" and "Bedrock" and sparked controversy for its use of increasingly homoerotic and misogynistic imagery and themes. The album was only moderately successful commercially and critically. It received rave reviews, with specific praise being given to tracks "Brickbank" and "Mr. Purple." However, it received mixed reactions from other critics, with some saying the lyrical content was too extreme for some listeners. Its most successful single, "Bedrock", debuted atop the US Billboard Hot 100 and was later certified platinum by the Recording Industry Association of America (RIAA). By the end of 2018, Neon Infinity had been certified gold by the RIAA. The album featured a major musical departure from Future's previous releases, as he abandoned the futuristic body suits he had been wearing earlier in his career. He also began incorporating trap elements in his style. A music video was released in conjunction with the album's release. The video for "Bedrock" (which features a cameo from American singer Nick Jonas) was directed by Justin Bieber and it received critical acclaim, with Billboard calling it "the best visual single of 2017". Future has cited the album as his "strongest lyrically" and "best album since, well, probably the good kid, m.A.A.d. city era." Background and recording In 2013, Future signed a joint recording contract with Warner Bros. Records and Atlantic Records, and with Interscope Records, and began working on his fifth studio album, untitled. He opted to work with no other emcees as a way to avoid writing and rapping from a "dictatorial" standpoint. He began working
