There exists a single world in which the War between good and evil has raged for countless years. The bloodstained ground left barren and emptied of life. Generations have been born and have grown up in this troubled land as a vicious cycle of hatred and conflict, with neither the faintest hint of a solution. Algrist, the representative of the Elden, a race with a unique power called "Levity", founded a settlement in the Lands Between in a remote region in this world in order to establish a new world.

There, the Elden people, born and raised in the emptiness, begin to go about their lives. Algrist High School, a school for the youth of the Elden, has also been established. The Alvra Kingdom, a kingdom of the Elden, has also been founded in the southern part of the Lands Between. In this school, you, a student of the Alvra Kingdom, are making your way in the young and advanced world. The Alvra Kingdom is a country of harmony, a land that promotes the enlightened values of peace, love, and kindness, as well as the Elden as its people. **Dynamics of free-space electron vortex beams with a magnetic field. Electron vortex beams (EVBs) have attracted a great deal of research interest due to their size reduction feature and their various potential applications. Recently, a few experiments on EVBs with strong external fields, such as a magnetic field, have been conducted. In this paper, we describe, for the first time to our knowledge, the time evolution of EVBs with an external magnetic field. We show that the magnetic field can effectively generate the motion of EVBs from head to tail during propagation and significantly influence the spin structure of the EVB beam. We also show that the transverse magnetic field can suppress the spin-dependent scattering between the spin up and down components of EVBs, but the longitudinal magnetic field can lead to the scattering.**  
**Q: Filter a list using selected file: C# I'm trying to filter a list of Items using a file that can contain one of the specific items in the list as a substring. The problem is, i'm not being able to save the filter parameters inside an object so that it can be reloaded when the application closes. Do you have any idea how to create this object so that I can filter the list from the file each time I run the application? Or, is there a way to save the list filtrated so that when I run the application again it appears the same filtered list? The string that contains the filtered elements has an unique character to identify it, but the list items are common to all the strings. A: I resolved the**
