If you're like most Photoshop users, you've hired a contractor or a freelancer on Fiverr. Fiverr is an incredible resource for services ranging from designers to engineers. They're a great resource and also easy to find on apps like LinkedIn. When I was trying to hire a web designer, I went to Fiverr, searched for web design, and found a couple of designs by people who'd worked freelance on the platform. Their prices seemed fair, so I made an offer to hire one of them, and made sure to rate him highly. I noticed he had started a blog where he detailed his day-to-day design work, and I found it super useful. So I started rating him as well, where we both were able to see which design he did better. If you don't want to waste time scanning documents by hand, you definitely need to install the Scan utility. Scan is a good in-app solution to handle basic scanning needs. Creating and loading the database are fairly easy; you can pull information from other programs. It doesn't generally do complex scanning work, but it works for what it was designed for. I use it every day.
