Redbooth Registration Code

Redbooth is a very interesting service that aims to provide its users a very intuitive tools for project management, team collaboration, and task organization, without compromising many compromises. Awesome platform-support and good integrations For starters, it's worth pointing out that the development team behind this easy to use task and project management web app have done their homework, hence, you're currently offered two useful desktop clients for both Windows and macOS, as well as two for iOS and Android. Not only that, but you can also take advantage of this nifty tool via its extensions for Google Chrome, Outlook, and Gmail. Before we dive deeper into detail, it's also worth noting that some of Redboot's integrations include Box, Google Drive, Dropbox, Evernote, Slack, Okta, Zapier, Test Lodge, and Hubstaff. Intuitive and powerful project management tool We're going to focus on Redbooth's desktop app for Windows, which allows you to get more close and personal with the everything this service has to offer. The first thing you'll notice is the app's clutter-free and no-nonsense GUI, with three main sections: Dashboard, Workspaces, and Reports. You can effortlessly create, organize, and delegate tasks and even take advantage of the fact that Redbooth comes with support for multiple assignments, meaning that you can assign a task to more than a single person. Of course, you can also prioritize tasks in order to meet deadlines, share feedback, chat with your team members directly, share files, and organize content via hashtags. So neatly-designed that it almost tricks into thinking it's nowhere near as feature-packed as it should The app is fairly capable when it comes to reporting, as well. Basically, you can easily gain a thorough understanding of your projects via compelling visual representations, for each individual workspace. Since we're on the subject of workspaces, those of you familiar with basic development methodologies, are sure to see that the Workspace section is shaped to reflect an Agile Kanban workflow which is, by all accounts, a very good thing. What's also worthy of your attention is the fact that you're provided with a few project templates, which can be customized according to your needs, of course. Last but not least, you might also appreciate the app's so-called "Timeline View" which employs stylish Gantt charts to make project planning as lean as possible. Definitely one of the most versatile
