“We’re excited about the new innovations that make the world’s most advanced image editing applications even smarter, more collaborative and easier to use across surfaces,” said Shantanu Narayen, CEO of Adobe. “Adobe Photoshop for iOS and Photoshop CC for Apple CarPlay are uniquely positioned to help our users get better results faster, and we’re going to continue our innovative partnership with Apple to continue expanding on that.” The new share for review technology enables users to collaborate while working in Photoshop, saving time together and accelerating the delivery of amazing user experiences. Users can simply choose to “share for review,” starting a new state in Photoshop by adding a comment, providing a helpful recommendation, or instantly sharing edits. After a select amount of time, which may depend on the scope of the collaboration, the comments are saved for the group, and other users can access any don’t show card to view the collection. Not only can they see what was shared and reviews comments, but users can actually also remove comments if they wish. For example, if a person creates an amazing gradient on a web page but doesn’t have the expertise in a complex graphic design software, he or she uses Photoshop to create the gradient and then “shares for review” in the browser. Share for review is also ideal for content collaboration because of the ability to work with site owners, web designers, and content creators who are not familiar with Photoshop. It makes

sense to save time and provide guidance when the content is in its most basic form.
